

## **Contaminant Hydrogeology, GLG 482/582**

### **Assignment Write-Up**

The homework assignments in this course comprise the major component of your grade. It is important that you approach these assignments with thought and care. Make your write-ups of professional quality. Your write-ups should be done on a word processor and should be neat and well-organized. Write clear and concise paragraphs. Avoid grammatical and spelling errors. Everything should be clearly labeled.

#### **Tables and Figures**

Many questions will be best answered with a table. Figures will often play a major role in your write-ups. These tables and figures will often be made in Excel or in our modeling software. When possible, tables and figures should be imbedded into the text of your write-up at the first convenient location after the place in which the text refers to them. Refer to all tables and figures in a clear manner; make sure they are clearly labeled. Make sure that you always include units and axis labels.

#### **Discussion**

The questions on the assignments are designed to be thought provoking with imbedded lessons if the questions are fully explored. Make sure you answer every one. Give the questions some thought. Discuss the implications when appropriate. Feel free to explore the questions in more detail than is explicitly asked. Avoid just answering the questions in the shortest possible way.

#### **Grading**

Your homework assignments will be judged based on:

- a) how accurately and fully you answer all questions
- b) clarity of presentation including the way in which figures and tables are included, used and referenced
- c) organization of writing
- d) spelling and grammar
- e) proper use of significant digits and units
