

SPSS System Software: Steps in Executing a Non-interactive Program

1. Create and SPSS command file, *filename*.
For example: program.sps
2. Submit the command line to the SPSS compiler, specifying the output file.
`spss -m filename > output_filename <ENTER>`
For example: `spss -m program.sps > program.lst <ENTER>`
3. Note the status message displayed on screen after program completion:
End of job: 53 command lines 0 errors 0 warnings 0 CPU seconds
4. View or print the output file using the appropriate application:
For example: `more program.lst`
